Leasing Plan issues

1. When the lease plan is archived from the admin panel, the app shows a pending status.

2. When the lease plan is rejected from the admin panel, the app navigates to the user agreement screen.

3. When we reject one or more documents from the admin panel, and then try to re-upload the documents on the app side, it shows that all documents are required.

4. Even after the lease plan is approved, the pending button is still showing.

5. When we reject a user's plan, the reason should also be sent to the user so they don't repeat the same mistake.

6. When we reject a user's document, the reason for rejection should also be sent to the user so they know why the document was rejected.

7. There should be rejected screen with reason.
